

# Charge-Plus *Feature Sheet*

## SimulCharge™, 1 x USB OTG Adapter for USB-C Mobile Devices

The Charge-Plus is a SimulCharge™ adapter designed for use with select USB-C mobile devices. It features simultaneous charging and access to data and one USB-A port for connecting a USB peripheral.

The small adapter can easily be carried around in your pocket and it features an OTG mode. Like with SimulCharge™, the mobile device remains as USB Host so it can communicate with peripherals. However, unlike SimulCharge™, OTG mode lets the mobile device to power the peripherals from its own battery. This allows you to use the Charge-Plus without an external AC power source.

The Charge-Plus' USB-C power port is rated for the standard 5 volts at 2 amps. This means you can use your mobile device's own charging cable with the adapter. A separate power supply is not included.

*Note: For system requirements and other technical information regarding this adapter, please see the specification sheet.*
